## **LITE ROCK DEBRIS NT6194**

### **INSTRUCTIONS**

Attach Lite Rock Debris to plaster surfaces with glue or wet plaster. **TIP!** To make Lite Rock Debris appear as if submerged in mud or soil, insert Lite Rock Debris into Contour Sheet Plaster while it is wet. This effect can also be created by sanding one side of the Lite Rock Debris (with 120-grit sandpaper) until it is flat. Glue flat side to habitat base and landscape around it.

For custom coloring, dilute Rock Color System Pigments (NT6177-NT6184) with water in a disposable cup. Add Lite Rock Debris (we recommend Natural) and soak until desired color is achieved. Place Lite Rock Debris on paper towels or newspaper to dry. If needed, repeat to darken. To lighten, mist with water while the Pigment is still wet.

### **Contents Settle**
